**Subject:** CFAC - Field Modification #2

Mike,

I have reviewed the Phase I SAP MOD #2 Record of Modification from Roux and have the following comments:

- Please verify that well CFMW-23 is the new identifier for well TW-10.
- Please provide the field log for the abandoned borehole.
- Please provide a figure presenting the location of well CFMW-23 and borehole CFMW-23a with respect to local site features.
- Please change the word 'Rational' to 'Rationale' in the heading for the *Rationale for Modifications/Potential Implications of Modifications* section.
- Please remove the phrase, "the limited saturated thickness of unconsolidated deposits," from the second paragraph of the *Rationale* section. The saturated thickness of the aquifer is, at times, as much as 32 feet thick.

Feel free to contact me directly if you have any questions or would like to discuss.

Thanks very much,

Sean M. Coan, PG | Project Manager/Geologist | **CDM Smith** | 50 West 14<sup>th</sup> Street, Suite 200 | Helena, MT 59601 |
